# Climate Adjusted Rainfall 

Hydrologic Design for Illinois' Future

Loren Wobig, P.E., CFM<br>Wes Cattoor, P.E., CFM

## An Examination of Bulletin 70

*Background
*Limitations
*Adjusting Rainfall Quantities

* Does climate change have significant impact?
*Updating Bulletin 70
* Implementing the update

## Bulletin 70 Background

*Published in 1988, revised in 1989
*61 precipitation stations sampled
*83-year record (1901-1983)

* Included climate trends
*Provides a static result

## Shortcoming for design

*Last 33 years of data is not included
*Should be designed for full project life?

* Bulletin 70 data year midpoint $\sim 1942$
* $50 y r$ Design life $=2067$
* 125-years difference (1942-2067)

## Bulletin 70 Climate Trends

Table 1. Ratios of 1941-1980 to 1901-1940 24-Hour Maximum Rainfall Amounts for Selected Recurrence Intervals in NWS Climatic Sections of Illinois

| Recurrence interval | Average ratio for given recurrence interval |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| (yrs) | NW | NE | W | c | $E$ | w $\boldsymbol{s} \boldsymbol{w}$ | ESE | SW | $S E$ |
| 2 | 1.12 | 1.12 | 1.07 | 1.08 | 1.04 | 1.09 | 0.98 | 0.96 | 0.95 |
| 5 | 1.13 | 1.16 | 1.07 | 1.09 | 1.06 | 1.11 | 0.96 | 0.97 | 0.95 |
| 10 | 1.14 | 1.16 | 1.07 | 1.06 | 1.03 | 1.14 | 0.98 | 0.99 | 1.00 |
| 25 | 1.17 | 1.20 | 1.01 | 1.02 | 1.04 | 1.11 | 1.05 | 0.99 | 1.04 |
| Mean | 1.14 | 1.16 | 1.06 | 1.06 | 1.04 | 1.11 | 0.99 | 0.98 | 0.98 |
| *1901-1940 VS. 1941-1980 |  |  |  |  |  |  |  |  |  |
| * Up to 20\% increase northern \\|linois |  |  |  |  |  |  |  |  |  |
| * Up to $5 \%$ decrease in southern Illinois |  |  |  |  |  |  |  |  |  |

Figure 3. Illinois climatic sections adopted by the National Weather Service

## Adjusting for Today's Project

* Project in Roanoke, IL for HUD NDRC
* Central region (CD 4)
* 24 hr critical duration
*50-year project design life - 2067
* Adjust for climate change with best available data
* Utilized regional annual rainfall trend data
* Assume total annual rainfall trends = frequency event changes

## Bulletin 70 Climate Trends

*Adjustment ratios gave more weight to latter 40 year period

Table 9. Adjustment Factors for Climatic Trend by Section and Storm Period

Avemge ratio for given storm duration in each section

| Climatic section | 24 hrs | 48 hrs | 72 hrs | 5 days | 10 days | Combiried |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1.06 | 1.05 | 1.06 | 1.04 | 1.04 | 1.05 |
| Northwest | 1.07 | 1.04 | 1.05 | 1.03 | 1.02 | 1.04 |
| Northeast | 1.05 | 1.03 | 1.05 | 1.05 | 1.05 | 1.05 |
| West | 1.02 | 1.03 | 1.04 | 1.03 | 1.03 | 1.03 |
| Central | 1.02 | 1.04 | 1.05 | 1.04 | 1.04 | 1.04 |
| East | 1.04 | 1.04 | 1.05 | 1.01 | 1.01 | 1.03 |
| West Southwest | 0.99 | 0.99 | 0.99 | 1.01 | 1.01 | 1.00 |
| East Southeast | 0.98 | 0.98 | 0.98 | 0.99 | 0.99 | 0.98 |
| Southwest | 0.99 | 0.98 | 0.98 | 1.00 | 1.00 | 0.99 |
| Southeast | 0.99 | 0.98 | 0.98 | 1.00 | 1.00 | 0.99 |

## Adjusting for Today's Project

## Structures Damaged

## Value of Damages

## HUD / DCEO / IDNR / ISWS

## Partnership

*2 Phases of work based on:

* HUD/DCEO: Funding (Reallocated Hurricane IKE funds)
* University of Illinois: Illinois State Water Survey: Work
* IDNR, Office of Water Resources: Project Oversight
*IDNR, Office of Water Resources Goals:
* Update the design storm rainfall analysis in Bulletin 70 (Huff and Angel, 1989) for Illinois;
* Preparation of design storm tables commonly used for; Infrastructure design, flood studies, mapping, and regulation;
* Utilize current technology to estimate future condition (50-yr) events to reflect climate change conditions for resiliency
* Phase 1 completed by end of 2017
* Phase 2 completed by end of 2018

## Bulletin 70 Update - Phase 1

*Rain gages throughout Illinois and bordering states will be used to prepare extreme rainfall event data.
*Historical rainfall data, ranging from hourly to daily, from the National Centers for Environmental Information (NCEI) (formerly National Climate Data Center/NCDC) will be used
*Cook County Precipitation Network(CCPN) will be considered

* 10 regions defined in Bulletin 70 will be utilized
* Base Report to include
*2-, 5-, 10-, 25 -, 50 -, 100 - and 500 -year recurrence intervals
*1-, 2-, 3-, 6-, 12-, 18-, 24-, 48- and 72-hour rainfall durations
*Revised report to be releaseß̈ Dec 31, 2017

## Bulletin 70 Update - Phase

*The following checks will be performed upon the rainfall data:

Exploratory data analysis, e.g. plot the annual maximum series (AMS) data for each gage, trends and outliers.

Combining two or more stations/missing data

Determine significant spatial correlations among the gages

Discordancy and heterogeneity measures from the L-Moments software to select stations for analysis (ask U of I)

Other tests and analyses, depending on the above steps

## Bulletin 70 Update - Phase 2

*Phase 2: Future Conditions

* Scope of work being developed for Phase 2
* Future rainfall data will be forecasted to 10-year and 100-year frequency for 2050 and 2100;
* Not a trend analysis - Hindsight look at best performing past prediction models.
*Similar work already being performed in Cook County and for the Des Plaines River watershed

## Bulletin 70 Update Phase 1 Timeline

March Project Start

June
July
July
November

December
December

Quality controlled, rainfall data from all gages
Data sets selected for statistical frequency analyses
Maps comparing trends across different regions
Tables for each gage for noted-year recurrence intervals and for various-hour rainfall durations, using the 10 regions defined in Bulletin 70 completed

Report in a pdf format for internal and external review
Phase 1 Final Report pelease.

## Implementing the Update

* Preparation of design storm tables commonly used for:
* Infrastructure Design,
* Flood studies,
* Mapping, and
* Regulatory Permit Applications.
